HOUSE PRICE PREDICTION USING PYTHON

DATE: 13/05/2023

Aim: To implement a house price prediction model using python.

Algorithm:

1. Import all the necessary libraries (pandas, numpy, Seaborn, matplotlib.pyplot)
 2. Import the desired dataset.
 3. Have a glance at the dataset and perform exploratory data analysis by plotting the data.
 4. Segregate the dataset into dependent & independent variables as X and Y.
 5. Visualize the coefficient of every features as a dataframe and analyze it.
 6. END
