

EXP NO: 20

FUTURE SALES PREDICTION USING PYTHON

DATE: 24/05/2023

Aim: To implement a future sales prediction model using python.

Algorithm:

1. Import the required libraries and functions
(pandas, numpy, train-test-split)
2. Import the desired dataset.
3. Have a glance over the dataset and check for any NULL values.
4. Find the correlations of various features
5. Segregate the dataset into independent
6. Train the model using Linear Regression.
7. Calculate the model score
8. END
